Carrier Logistics Issues Upgrade For LTL Software

Carrier Logistics Inc. has released a major update for its FACTS Enterprise management software for less-than-truckload operations.

Carrier Logistics Inc.

The new FACTS 11.2.1 release features several enhancements to streamline workflows and strengthen security, including:

- An updated home page with main menu dashboards and the ability to create a customized menu on the fly.
- Password authentication both in the application and online to improve security.
- New general rate increase and data import utilities to facilitate data updates.
- And more flexible fuel-surcharge maintenance.

"This is by far the most enhancements under one release number that CLI has ever provided," said Kevin Linardic, vice president of technology at CLI.

CLI users can upgrade to the new version now at no cost.
